EDUCATION

BACHELOR OF TECHNOLOGY

Jul 2019-May 2023

GITAM UNIVERSITY | Computer Science and Engineering (CSE) | CGPA: 7.82

COURSE WORK

Completed a comprehensive curriculum covering Data Structures, Algorithms, OOPs, Database Management Systems, Operating Systems, Computer Networks, and Machine Learning.

SKILLS

Languages: Python, SQL, C, Oops.

Data Analysis: Pandas, NumPy, Matplotlib,, MS Excel.

Databases: MySQL, OracleSQL.

Web Development: HTML, CSS, DJANGO, FLASK , JavaScript **Others:** Git.

EXPERIENCE

Acme Grade

May 2022-Jul 2022

Machine Learning Intern

- Gained invaluable hands-on experience in data visualization and ML algorithms, actively contributing to the team's success.
- Led the development of a cutting-edge "Movie Recommendation System," collaborating effectively with team members to implement efficient data preprocessing techniques.
- Engaged in continuous improvement efforts for machine learning models, actively participating in experimentation, and iterative refinement to optimize system performance and user experience.

PROJECTS

Identification and Classification of Human Blood cells

Human blood is essential for life. Blood cells are used to diagnose different disorders. This project evaluates the patients health by using the you only look onces algorithm to identify the count of blood cells . Machine learning, which can yield models for pattern recognition, classification, and prediction from acquired data, has been widely used in prediction to identifying human blood cells

Movie Recommendation System

This recommendation system recommends different movies to users.

This system is based on a collaborative approach, it will give progressively explicit outcomes contrasted with different systems that are based on the content-based approach.

CERTIFICATIONS

- Acquired knowledge in Data analysis with python

- Completed Database management essentials and data structures courses.
